

This is the correct way to recycle. The crate is not overflowing allowing the handler to lift and sort easily.

This is the wrong way to recycle. Overflowing crates will not be collected; glass must be divided into manageable loads to allow easy lifting and sorting.

The crate on the right is a fish bin and this is much larger than the official crate and would be very heavy to handle. This crate will not be collected.

Do not use cardboard boxes, they can become wet and fall apart when sorting. They will not be collected. Use the official crate of something similar in size and make.
